Warranty Metal Riders

Scope

Soprema, Inc. offers warranty metal riders to select roofing projects when a metal rider is required by the project specifications or negotiated by the building owner or its designee. Warranty metal riders are limited to Soprema edge and cap metal systems or pre-accepted metal edge and cap systems from select manufacturers. Shop fabricated edge and cap metal systems are also eligible for warranty metal riders but are subject to additional requirements as outlined below. Shop fabricated edge and cap metal systems must also comply with gauge and fastening requirements as described below.

Fastening Requirements

The fastening of the metal system must be determined by the Designer of Record and be in compliance with the Sheet Metal and Air Conditioning Contractors National Association (SMACNA) and FMGlobal Loss Prevention Data Sheet 1-49 fastening requirements.

Factory Fabricated Systems

Factory fabricated metal edge and cap systems must be FMGlobal Approved and a warranty shall be provided to Soprema by the manufacturer. In lieu of a warranty from the metal edge and cap system manufacturer, a letter from the contractor installing the metal edge and cap system, stating that the metal edge and cap system was installed in accordance with the manufacturer's requirements and the project specifications, will be accepted.

Shop Fabricated Systems

Drawings of shop fabricated metal edge and cap systems, pre-approved by the Designer of Record, must be submitted to the Soprema Technical Department for review and acceptance prior to the project start-up. Shop fabricated metal edge and cap systems must be composed of stainless steel, copper or Kynar[®] coated metal. If Kynar[®] coated metal is used, then the roofing contractor must provide proof of purchase of the flat stock to Soprema before the warranty can be issued.
